SUMMARY

Web developer moving into games. Credited on Rain World: Downpour. At work I do a lot of Python ETL and SQL; in spare time I build games in C, Java, and similar. I like working with Entity Component Systems.

Nick Voorham

Aspiring Game Developer

EXPERIENCE

Web Developer

Boring Digital · 2024 - 2026

- Worked on energieloketten.nl and related backend processes handling user data for home insulation subsidy schemes.
- Wrote Python ETL scripts to clean up mixed source data into a shared database format.
- Wrote the SQL queries that powered those transformation steps.

Web Developer

Picturae (ICT) · 2021 - 2023

- Maintained and upgraded many Joomla sites, including legacy versions that needed modernization.
- Managed thousands of JSON configuration files that filtered database records across client systems.

SKILLS

Web	JavaScript, Vue.js, React, Joomla, Python, SQL / ETL
Game / systems	C, C++, C#, Java, Lua, ECS / Flecs
Practice	Data-oriented design, game prototypes
Languages	English, Dutch

PROJECTS

Rain World: Downpour (Singularity Bomb)

2023 · Official DLC · credited contributor

Made the Singularity Grenade (Singularity Bomb) and Cloak items for Rain World: Downpour (More Slugsats Expansion), shipped January 19, 2023. Started as community work, then landed in the official release: delayed blast, spatial pull, and combat VFX.

Protocol Kardashev

2024 · C · Flecs, GLFW, OpenGL, Box2D

World prototype with custom shaders and an ECS setup. Good practice for data-oriented design, memory layout, and C. Paused when adding features under Flecs got expensive; solid base for a next try.

Space shooter

2017 · Processing 2 / Java

Enemy attack patterns and a grid-based spaceship designer with five weapon types: gun, flak, explosive, forcefield, and laser.

Undertale-style battle clone

2017 · Processing 2 / Java

Five unique attack patterns, UI options, and an infinite battle mode where attacks escalate in speed.
